

Mac Installation Instructions

Mac gives you an “undefined developer” error when trying to launch our software. Follow these steps before launching the program for the first time to bypass this error.

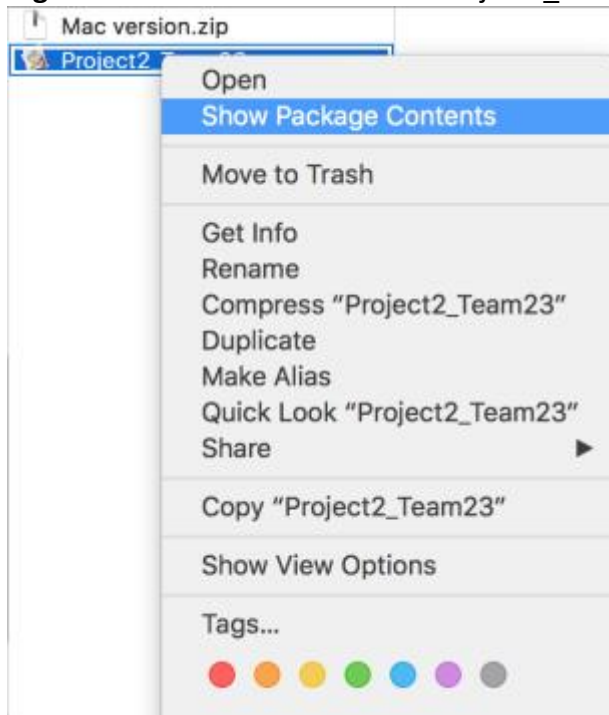

1. Download the software from the provided link
2. The software will be in your Downloads in the form of a **.zip file**

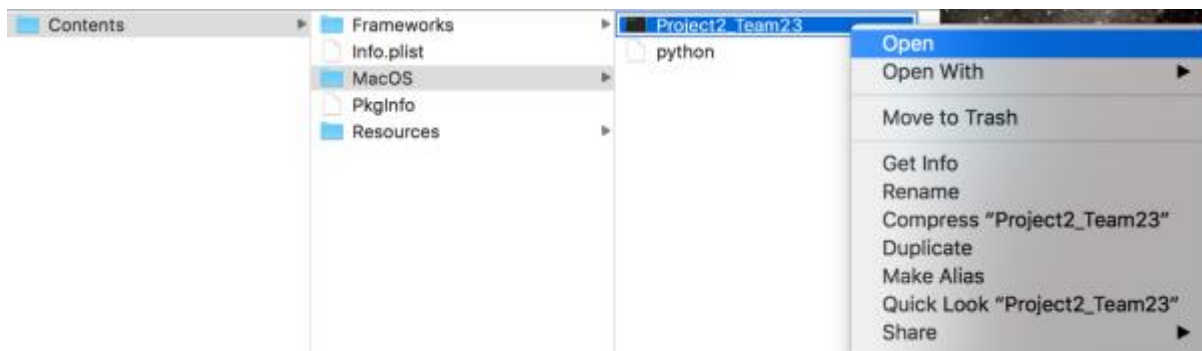

3. Unzip the software by double-clicking “Mac version.zip”

4. **Right-click** on the extracted file “Project2_Team23.app” and select “Show Package Contents”

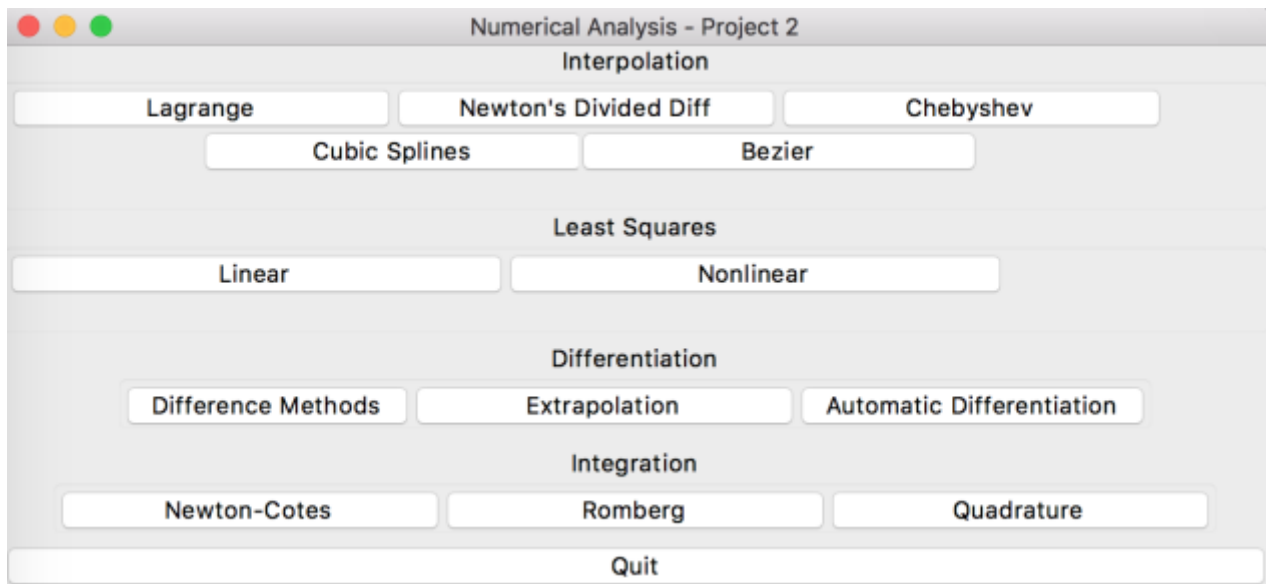

5. Navigate through the following folder path: Contents → MacOS → Project2_Team23. **Right-click** on “Project2_Team23” and select “Open”

6. Select “Open” when the following message comes up:

7. The software will now open and you will be able to use the software normally

8. Steps 1-6 only need to be completed after you first download the file. Subsequent runs of the software do not require this. So to run the software with ease after completing these steps, double-click the file you right-clicked on in step 4.

We cannot devise a way to bypass this process, as only an Apple certified developer is granted a certificate that gets rid of that error.
